

# UST Compliance Systems and Consulting Services

Tablet, Laptop or Cell Phone/PDA Entry

## Key Benefits

- ✔ Wireless electronic data synchronization and on-site printing **keep inspectors in the field** not in the office printing, faxing or submitting inspection reports. Eliminates wasted time and errors caused by manual entry and transcription of handwritten compliance results. Uploads compliance results directly to the database and downloads site and tank data eliminating the need to bring paper files on-site.
- ✔ Extends your UST site database's information into the field. Enables entry compliance information regarding spill prevention devices, tank and piping release monitoring, line leak detection, corrosion protection, tightness testing, inventory control, overflow prevention, and vapor recovery. Helps inspectors plan driving route and get directions.
- ✔ Facilitates and standardizes entry of site, tank, piping, and dispenser details. **Streamlines data entry** by only asking compliance question appropriate for the site. **Captures photos** and other files with inspections.
- ✔ **Wireless Internet or Intranet synchronization** in or out of the office. **Print wirelessly** to deliver **on-site** inspection reports to facility operators.
- ✔ **Touch screen** interface for **simple entry** in all entry fields. Add new tanks, close tanks, and update existing tank data while on-site to ensure that registration data is up-to-date.
- ✔ Can be customized to integrate with **any state, federal or commercial UST database**.

- View and edit all facility and tank data in the field.
- Collect owner's signature on tablet or phone
- Print inspection reports, NOV and red tag notices on-site wirelessly
- Automatically calculate operational compliance
- Activate internal GPS
- Temporarily or permanently close tanks

## Manage Compliance Inspections

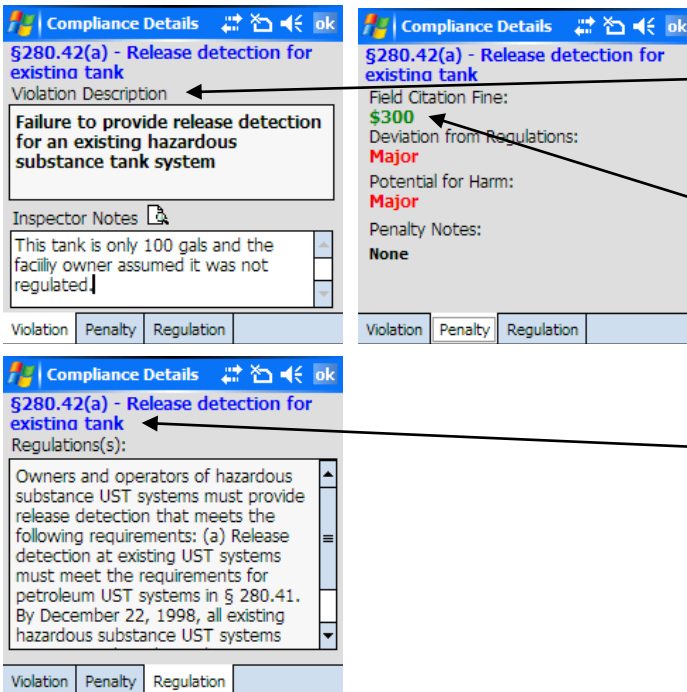

- Connect via the Internet
- Downloads assigned UST Inspections for this user
- Uploads compliance inspection results
- Schedule, Reschedule, Reassign Appointments in the Field

## Quickly Navigate Site Information

- Quickly switch between tanks at a site
- View the details of the tank construction while entering compliance information
- Only displays data appropriate to site construction
  - Tightness Test(TT) and Inventory Control(Inv) only shows for single walled tanks
  - Corrosion protection(CP) only shows for steel tanks
  - State I & II only show for gasoline USTs
- View facility notes and past site compliance history

## Compliance Library

- Centrally manage and distribute compliance rules and violation descriptions
- Assess penalties in the field
- Compliance engine ensures that all appropriate compliance points are evaluated.
- Download federal and/or state regulations for the inspector to reference in the field.

## More Information

MobileWright has customized the UST Inspector software for the EPA (Region 2), the State UST programs (CT, ID, and NH), and commercial customers. To see more details about the capabilities of the UST system visit <http://www.mobilewright.com/ustinspector.asp>. If you are interested in implementing this system for your UST program please contact Dan Blake at MobileWright Solutions at 617-852-7590 or [dan@mobilewright.com](mailto:dan@mobilewright.com).
